

PRODUCT BRIEF

Improve Your Agility in Today's Market

Leverage the NetX360® and SS&C Black Diamond® Wealth Solutions Integration

Working together, Black Diamond and NetX360® focus investments in the technology you need to manage your client's complete wealth picture. For many advisory firms, portfolio rebalancing is one of the single most important pieces of technology that they have. In fact, rebalancing software may impact your client portfolios more than any other system as it touches their investment strategies, risk tolerance, taxes, and more. As client needs and investment opportunities grow more complex, the need to have rebalancing software that is flexible enough to support even the most sophisticated structures is an absolute necessity.

Black Diamond Rebalancing & Trading provides the functionality you'd expect from a top-of-the-line portfolio management solution including:

Straight-through trade processing via FIX and NetX360®

Includes the ability to track the progress of the trade order throughout the life cycle of the trade submission.

Types of trades include:

- Mutual Funds
- Stocks
- ETFs
- ADRs
- and more.

Enhanced modeling

N-tier model of models—allows you to efficiently manage and organize your models so you can use them as building blocks when creating client investment strategies.

Inclusion of outside managers—functionality lets you leverage separate account managers for clients. You are able to set a target allocation to specific managers and have the system propose withdrawals or deposits from that manager when needed.

Security equivalents—allow you to track similar assets to ensure that the rebalancing engine doesn't unnecessarily sell out of one asset just to buy a nearly identical equivalent.

Tax-efficient Rebalancing

Helps you manage your clients' tax liability and ensures you are in the best position to minimize unnecessary gains while efficiently utilizing losses. Features include:

Asset location—to ensure you are taking advantage of tax-deferred or tax-exempt accounts by prioritizing purchases of less tax-efficient securities into these accounts.

Tax-loss harvesting—threshold alerts so you can choose to liquidate into cash or invest proceeds into a designated equivalent security.

Tax-specific rules—to control potential tax consequences such as wash sales, long-term, and short-term capital gains limits, and more.

Proactive Monitoring

Helps identify for review new cash, portfolios that have deviated from the model, tax loss harvesting opportunities, and other scenarios.

Secure Approval Workflows and Notifications

Ensure that only properly permissioned users can execute trades.

Designed with You in Mind

By providing a powerful, end-to-end technology stack, Black Diamond delivers a unified experience and minimize cost to service.

Just because a rebalancer is a powerful back-office tool doesn't mean it shouldn't be enjoyable to use. Its open layout and clean, modern design support the day-to-day workflows that are critical to your business success. Intuitive and easy to use, the system enables users to take advantage of its robust functionality quickly.

Our Partnership with BNY Mellon | Pershing

We continue to work closely with BNY Mellon | Pershing to ensure that together we are providing an exceptional level of service to our shared clients. We achieve this by continually investing in streamlined integrations between our two platforms, creating time-saving efficiencies that enable advisors to manage their clients' complex portfolios more easily.

For more information

We want your business to thrive. The robust functionality and core workflows of our next-generation rebalancing software demonstrates one more way we help you manage your client's complete wealth picture.
